

Designated Seed Treatment Product List

CropLife Canada and its members request that all commercial seed treatment operations (as defined by treating seed for sale or gain) successfully complete a 3rd party audit of their operation. This audit will help ensure strong environmental, health and safety practices are in place for the storage, handing and application of seed treatment products in Canada.

Effective January 01, 2018 only commercial seed treatment operations that have successfully completed an Accredited Seed Treatment Operation Standards audit will be eligible to receive shipments of designated seed treatment products for commercial application from Canadian distributors and ag-retailers.

The following seed treatment product registrations have been identified by CropLife Canada members as products that are to be used exclusively in commercial seed treatment operations that have successfully completed an audit (*).

Trade Name	Manufacturer	PCP#	For use in (Crops)*
Acceleron	Bayer CropScience	31067, 31068, 32441, 32462	corn, soybean soybean corn corn

** Farmer access to designated seed treatment products for on-farm application. There are no restrictions on the shipment of designated seed treatment products to farmers for their own on-farm seed treatment on labelled crops (i.e. see product label statement) unless otherwise stipulated by the registrant. See Accredited Seed Treatment Standards Bulletin #9 for more information.*

The Designated Seed Treatment Product Listing is at the discretion of the Canadian product registrant. The listing will be updated periodically and re-issued as CropLife Canada members choose to include registered seed treatment product(s) on the designated seed treatment product list.

Additional Accredited Seed Treatment Operation Standards information including a copy of the standards, list of auditors and program supporting materials can be found at www.awsa.ca
