NUMBER: 29

Shipments of Agrichemicals to Custom Applicators/Aerial Applicators not Having a Certified Storage Sites

The Agrichemical Warehousing Standards Association (AWSA) recognizes that weather delays and early morning applications may necessitate overnight pesticide storage outside an AWSA certified warehouse. The AWSA will allow early morning applications provided that a work order can be produced to verify that all products are to be applied the following day.

In such instances, agrichemicals must be stored in areas secured from public access and protected from weather with provisions for spill containment and cleanup.

It is important that certified sites shipping to custom/aerial applicators without AWSA certification ensure that quantities representing only one day's supply are shipped. If greater quantities are found stored at these locations which result in overnight storage, the certified site where the good originated will be charged with a violation of the AWSA Standards, potentially leading to the loss of certification.
